Spain for Transport and Logistics
Why Spain for
Transport and Logistics?

Spain stands out in Europe, as it does in the world, for its powerful network of air, land, rail and maritime infrastructures and the quality service they provide.

- The industry accounts for 7.9% of Spain’s GDP. A figure that rises to 10%, if we add the logistics activities carried out by industrial, commercial and service companies.

- The industry creates a million jobs.

- There is a heavy business concentration within excess of 197,000 firms linked to the industry.
Major production and consumption market

Spanish foreign trade, the main engine of transport and logistics, represents over 65% of the country’s GDP. In 2018, goods exports amounted to more than €285 billion and imports €319 billion, mainly driven by the automotive, pharmaceutical and chemical industries. 

Average annual growth of around 24% was recorded in internet and e-commerce sales in Spain. Half of those sales are to other countries.

TEN-T Framework

Two of the nine European multi-modal corridors (the Atlantic and Mediterranean) of the Trans-European Transport Network (TEN-T) run through Spain.

Global competitiveness

Spain is ranked 18th in the world in the latest Logistics Performance Index published by the World Bank.
